Ohio Business Gateway Registration Wizard

Ohio Deferred Compensation has been working closely with the Ohio Business Gateway during their modernization project and we've been able to let them know about some things we thought would benefit our employers. One of those improvements involves making the transaction registration process simpler.

During the Ohio Business Gateway Modernization Project's pre-implementation strategic planning process, they learned that simplifying the transaction registration process through wizard-type functionality is a leading practice among state business portals. In an effort to give business users a simple and streamlined experience, this interactive functionality is being included in the Modernized Gateway.

Rather than doing hours of research to determine which transactions you need to complete, business users who are new to the Gateway or who are growing into a different stage of your business' lifecycle will have the ability to answer a series of simple questions about your business. Based on your answers, the Gateway will provide a list of applicable transactions and service areas for which you should consider registering.

The wizard will adapt to you. The number and types of questions that are presented to you will change based on the answers you provide. This ensures that you only answer questions that are pertinent to your business, saving you time.

Simplifying the business registration process and improving your user experience have been and will continue to be a focus of the Gateway Modernization Project. The business registration wizard is one way Ohio Business Gateway continues to strive to make doing business in Ohio easy and efficient by providing e-government services that are simple and secure.
